

ASCENDOR UNAPORTE PLATFORM STEP LIFT

RELIABLE STEP-FREE TRAVEL UP TO 2M, INDOOR AND OUTDOOR, WITH SIMPLE, PITLESS INSTALLATION.

ABOUT

The UnaPorte® Platform Step Lift is a compact, weather-resistant vertical lift providing safe, step-free access for heights up to 2 metres. With no pit required, a soft start/stop drive, efficient space-to-platform ratio, and battery-backed operation, it is ideal for retro-fitting at entrances, terraces, and split-level areas indoor and outdoor.

STANDARD FEATURES

- Soft start/stop
- Push-button platform controls
- Wireless remote call stations
- Self-aligning access ramp
- Full graphic colour display
- Electrical emergency lowering
- 385kg load capacity
- Anti-slip anodised aluminium platform surface

OPTIONAL FEATURES

- Voice output module for audible guidance
- Automatic door operators for hands-free access
- LED RGB lighting for aesthetic integration
- Automatic emergency power supply
- Gate can be positioned to the left or right of the car
- Tinted glazing and configurable door insulation
- Mounting pillar for wireless call stations
- 4G GSM auto dialler emergency call system

TECHNICAL DETAILS *

Load Capacity	385kg
Driving Speed	Up to 9m/min (0.15m/sec)
Power Supply	220-240 V, 1 phase, 16A
Standard Platform Size	1100mm x 1400mm
Travel Height	From 600mm to 2000mm
Space Requirements	1294mm x 1736mm (plus all necessary clearances to comply with BS 6440)
Door Clearance	930mm width required
Controls	Push-buttons on the platform / remote controlled buttons for call stations
Safety Features	Reliable gate locking system and robust door drive with slip clutch
Internal/External Rating	IP54 protection class (internal components remain dry)

* Data are indicative and not binding; the manufacturer reserves the right to make any changes without prior notice, correct at time of print.

INSTALLATION

The UnaPorte® is designed for quick, low-disruption installation, with no pit and no crane required for travel heights up to 2 metres, making one-day installs achievable in many cases. Split-rail delivery enables the lift to be brought into tight or awkward spaces, while its modular structure makes retrofitting onto existing building fronts or entrances straightforward.

PRODUCT HIGHLIGHTS

The self-aligning access ramp ensures optimal access and the ribbed floor panel ensures optimal grip for wheel-chair users.

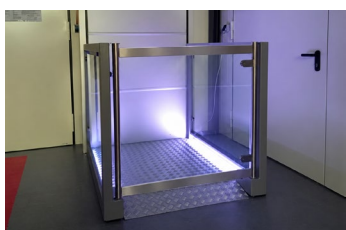

The integrated handle improves comfort and stability for users, while Ascendor's patented gate locking system ensures maximum operational safety.

Battery-powered travel keeps the lift running during power cuts, with automatic shut-down to preserve battery life during prolonged outages.

The colour display shows faults and guides users through simple fixes. This intuitive graphical interface resolves about 80% of issues without an engineer visit and provides clear information on the lift's operating status.

With a range of adjustable LED colours, the lift can be configured to blend seamlessly with its surroundings or act as a design feature, turning a necessity into an attractive element within the space.

The lift is weather-resistant for outdoor use. Durable finishes, sealed components and non-slip surfaces help ensure safe, reliable operation in all weather conditions.

KEY APPLICATIONS

The UnaPorte® provides dependable step-free access to terraces, balconies, raised entrances, decks, and indoor split levels where ramps are impractical or space is limited. Suitable for public buildings, community venues, schools, care homes, and retail environments.
